

BALANCED SLEEPING TEMPERATURE

Serta's Cool Balance™ Fabric Technology helps reduce the temperature swings that can disrupt peaceful sleep. This soft, comfortable fabric works by regulating the flow of heat from the body, so you feel more comfortable while you sleep. If your body is too hot, the fabric breathes to dissipate excess heat away from your body. If your body is too cold, the fabric works to ensure that the right amount of heat is kept near the body surface. Available in select Perfect Sleeper mattresses.
